# ENERGY SAVING GLASS OPTIONS

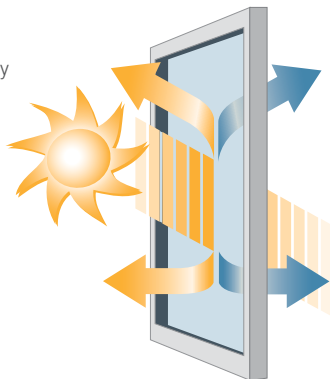

## LOW-E INSULATING GLASS

Our standard high-performance Low-E insulating glass enhances energy conservation by helping homes stay cooler in the summer and warmer in the winter. Low-E provides more protection against solar heat gain, reduces condensation, and helps limit fading of interior furnishings.

In cold weather, Low-E glass reduces the amount of heat lost by reflecting it back inside.

In warm weather, Low-E glass reflects the sun's energy and prevents it from entering the home.

## ENERGY STAR®

Many JELD-WEN® windows and patio doors may be ENERGY STAR® certified, which means they exceed the minimum energy efficiency criteria for the climate region in which you live. JELD-WEN has been a proud ENERGY STAR® partner since 1998.

## DIRT-RESISTANT GLASS

With this glass option, you gain natural cleaning convenience. By harnessing the sun's UV rays (even when the sky is cloudy) to loosen dirt from the glass, rainwater can easily rinse away grime. No manual activation is required.

## DUAL-PANE GLASS

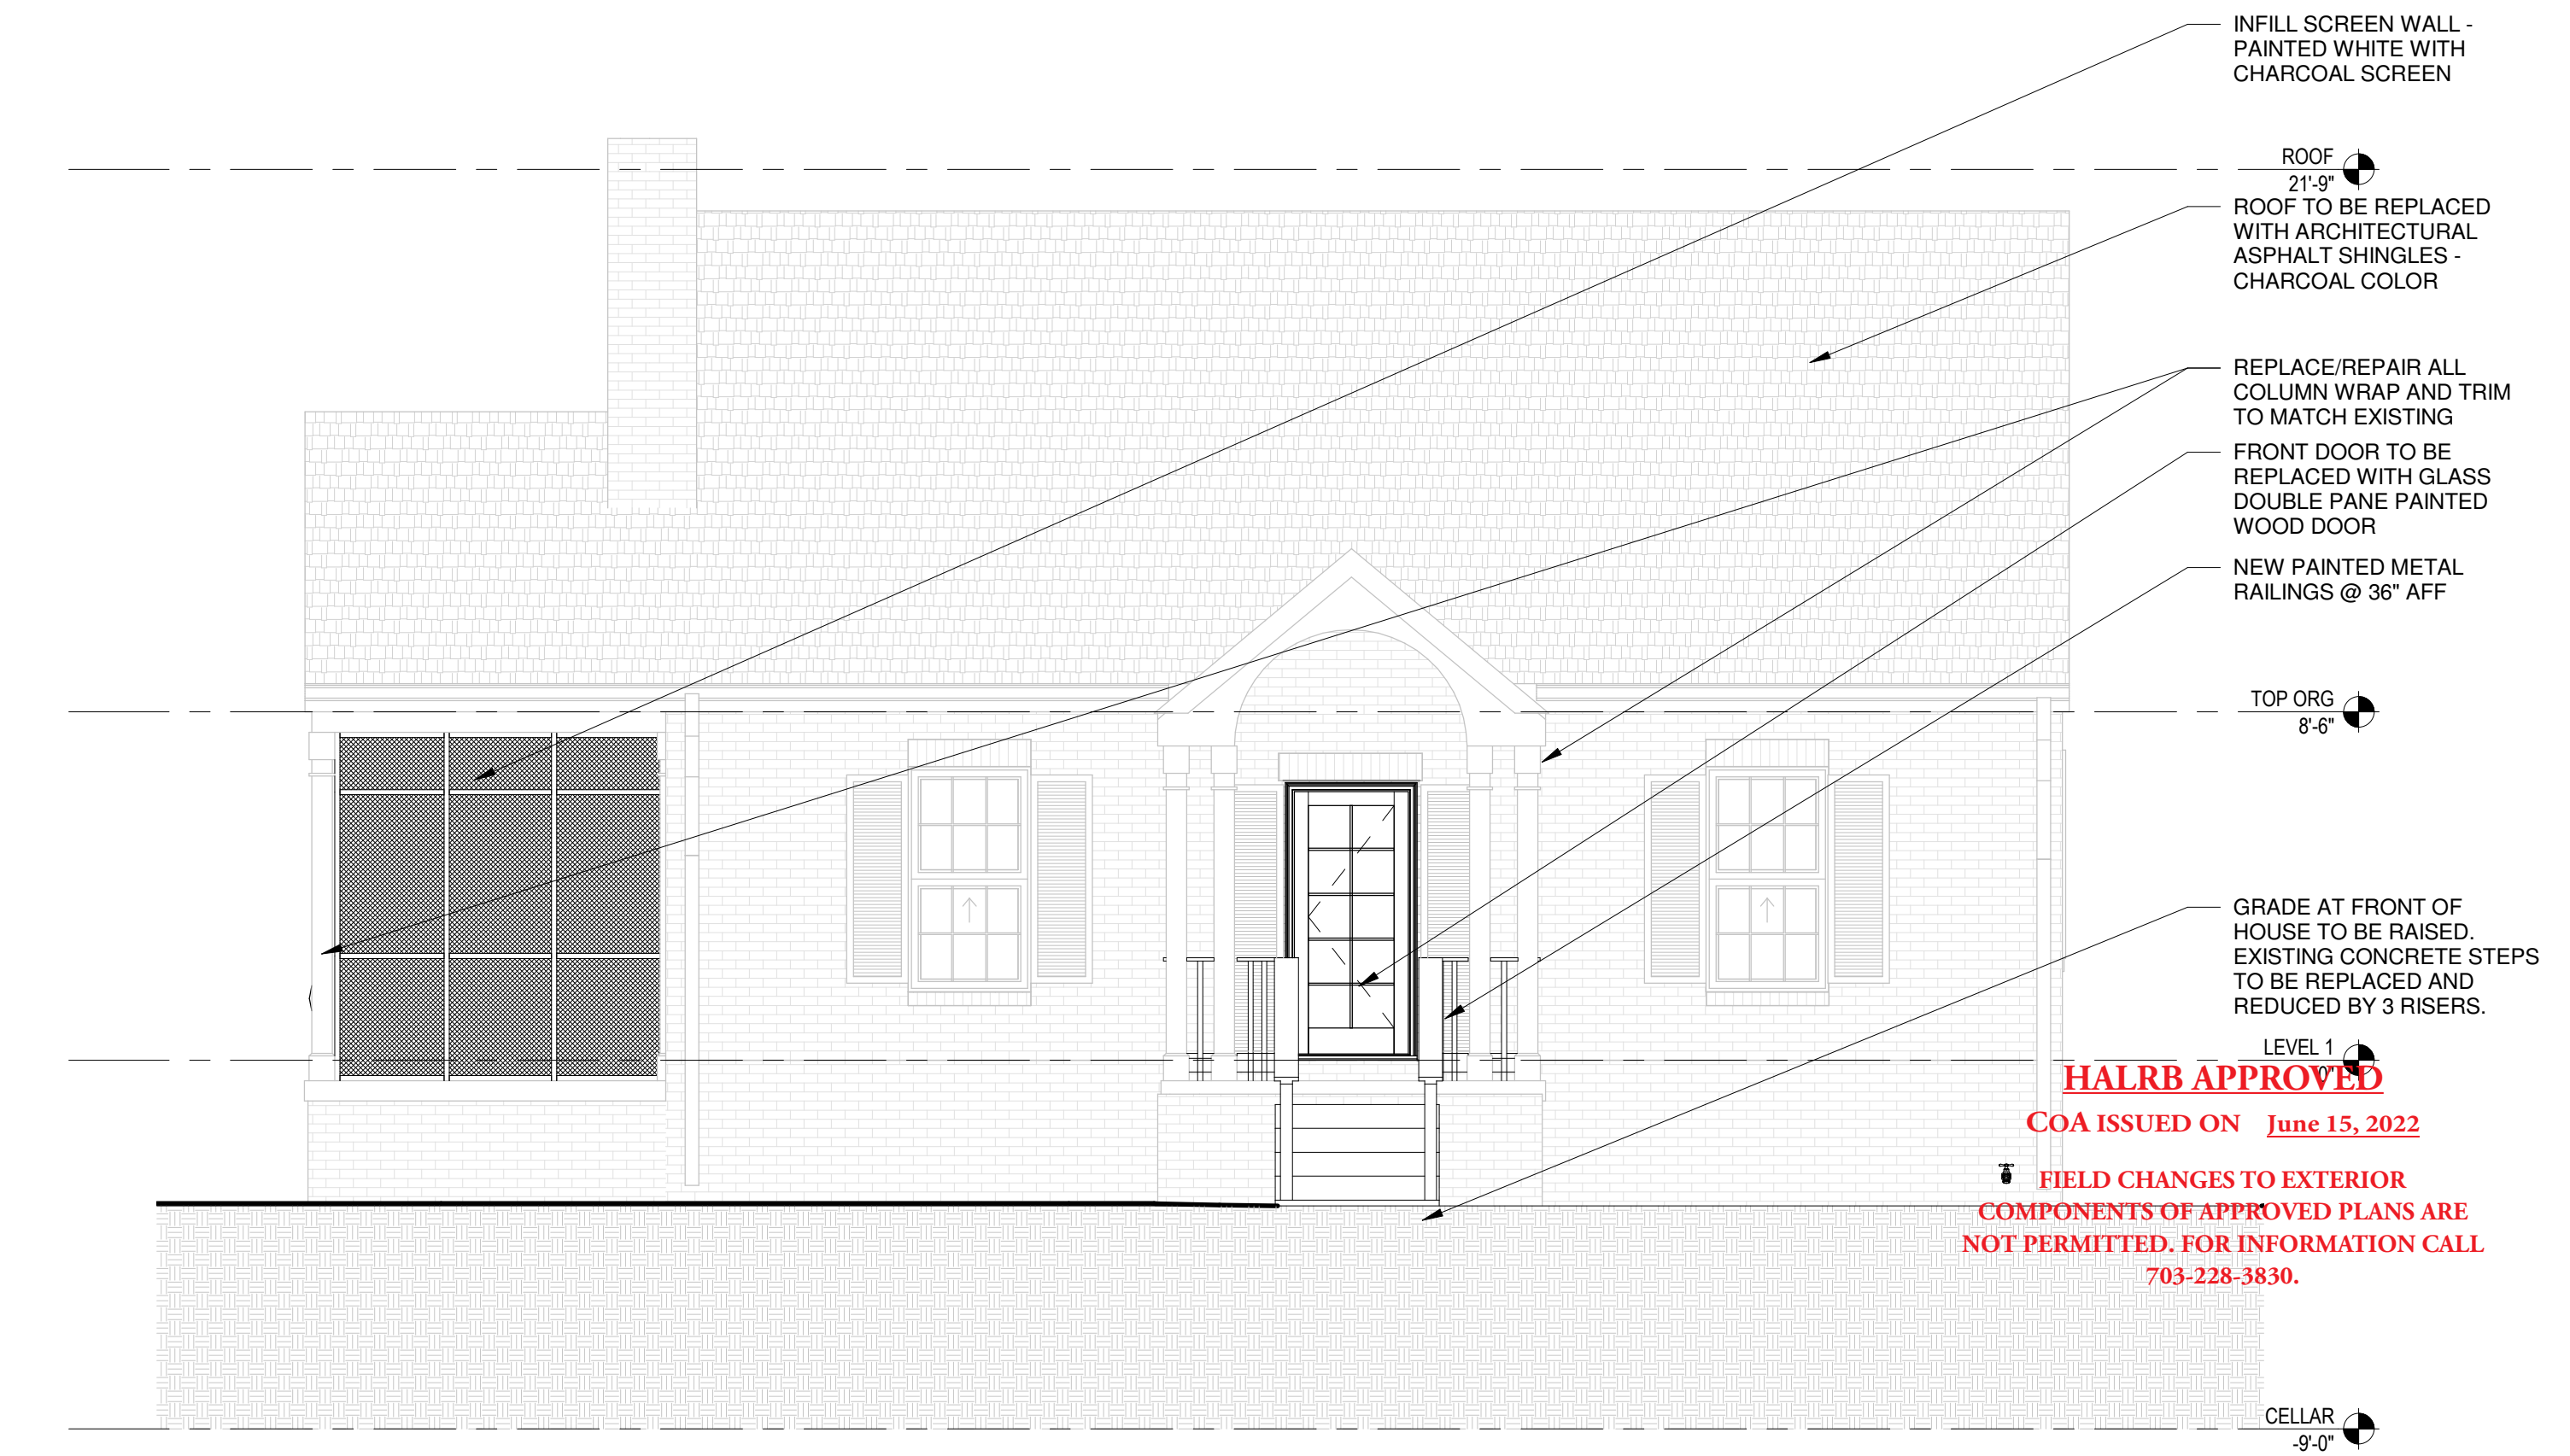

Energy efficiency is built into every JELD-WEN® window and patio door, starting with the dual-pane option. It's a tremendous value in insulating glass, with argon gas between panes as well as higher grade Low-E glass with triple layers of Low-E coating.

## PROTECTIVE FILM

Optional protective film can be factory-applied to both the interior and exterior surfaces of the glass. This means the glass surfaces will be reliably protected from debris and scratches that can occur during shipping and handling or at a construction site. So you won't need to spend extra time cleaning your new windows. What's more, it's easy to remove.
